PROFILE

Computer Science graduate (B.Sc.) with a strong focus on backend development and Linux environments. Proven experience architecting robust systems in Python, TypeScript, and C/C++, including a live production multi-tenant platform. Proactively uses agentic AI tools (Claude Code, Cursor, Codex) at an advanced level, extending them with custom-built skills and plugins, to accelerate development cycles and rapidly integrate new technologies.

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, Java, C, C++, SQL
Infrastructure & DevOps: Linux/Unix, Git/GitHub, Docker, Vercel
AI Integration: Google Gemini API, Claude Code, Cursor, Codex
Backend & Data: REST APIs (FastAPI, Express), PostgreSQL/Supabase, Row-Level Security, Scikit-learn

SOFTWARE ENGINEERING PROJECTS

- RealEstate.CRM** | *React, TypeScript, Node/Express, Supabase* 2026 – Present
- Built and deployed a production multi-tenant CRM (bilingual Hebrew/English) where tenant data isolation is enforced entirely through Postgres Row-Level Security, live, serving a real estate agency’s clients and listings.
 - Designed a deterministic algorithm matching client profiles to property listings, and a Chrome extension that cross-posts listings to Facebook Marketplace.
- Smart Fridge – 8200 IMPACT Accelerator Startup Project** | *Python, Java, Supabase, Gemini API* 2022 – 2023
- Engineered the core logic and database architecture for an MVP (Java, Firebase), implementing a custom ingredient-matching algorithm that improved recipe recommendation accuracy based on dynamic user inventory.
 - [Present]** Currently rebuilding the MVP as a scalable backend infrastructure (Python, Supabase), integrating Google Gemini 2.5 Flash for OCR receipt ingestion, data processing, and conversational features.
- ”TimeSkip” – ML-Based Assessment Platform** | *Python, REST APIs, PostgreSQL* Grade: 96
- Led the end-to-end backend development of a diagnostic system, tested on **104 users** in a real-world educational setting to evaluate behavioral patterns.
 - Achieved **85% classification accuracy with zero false negatives** using Logistic Regression, on top of a robust Python/REST API backend for high-frequency event logging with Supabase (PostgREST).
- Communication Networks** | *Python, C, TCP/UDP, Socket Programming* Additional Projects
- Built a Reliable UDP (RUDP) protocol with a Go-Back-N sliding window and custom DHCP/DNS servers (Python), plus reliable data transfer and congestion control over raw OS sockets (C).

ADDITIONAL EXPERIENCE

- ”Tziyun LaShevah” Learning Center** Herzliya, Israel
Math Instructor & Operations Manager 2021 – Present
- Mentored high-school students in advanced mathematics (5 units) and managed daily operations, scheduling, and customer relations under high-responsibility conditions during owner’s absence.

EDUCATION

- Ariel University** Ariel, Israel
B.Sc. in Computer Science 2026
- Academic Excellence:** Achieved a **96.6 average** in the final year.
 - Selected Coursework:** Operating Systems (100), Data Compression (98), Cyber Attack Detection (90).
- 8200 IMPACT & Shenkar** Tel Aviv, Israel
Impact-Tech Accelerator Program Alumni 2022 – 2023
- Graduated a highly selective acceleration program for impact-tech ventures tackling environmental challenges.

MILITARY SERVICE

- IDF Reserve Duty – ”Iron Swords” War** Israel
Operational Duty (Volunteer) 2024 – 2025
- Maintained a **96.6 academic average** while serving over **200 days** in high-pressure operational reserve duty.
